Fırat Atalay

Backend Software Engineer

Konya, Turkey | +90 552 813 78 50 | firatatalay.cs@gmail.com

mrfiratatalay.github.io | LinkedIn | GitHub | Medium

Professional Summary

Backend-focused Computer Engineering graduate with hands-on experience contributing to real-world software products through long-term and summer internships, part-time work, and team-based projects. Built **REST APIs**, authentication and authorization flows, multi-tenant applications, and database-backed systems using **ASP.NET Core**, **Entity Framework Core**, **Spring Boot**, **PostgreSQL**, and **Docker**. Experienced in collaborative development workflows involving task management, branching, pull requests, and code reviews, with additional full-stack experience in **React**, **TypeScript**, and **Vue.js**. Focused on building a long-term career in backend software engineering and contributing to reliable, maintainable, and well-structured software systems.

Technical Skills

Backend: C#, ASP.NET Core, Entity Framework Core (EF Core), RESTful APIs, Python, FastAPI, Java, Spring Boot

Databases: PostgreSQL, Microsoft SQL Server, MongoDB

Frontend: React, TypeScript, JavaScript, Vue.js, Next.js, Tailwind CSS, Material UI

Architecture & Practices: RESTful API Design, Layered Architecture, CQRS, Authentication & Authorization, Role-Based Access Control (RBAC), Multi-Tenancy

Messaging & Development Tools: RabbitMQ, Git, GitHub, Docker, Docker Compose, Flyway, Postman, Swagger/OpenAPI

Testing: xUnit, Jest, Vitest, Cypress

Professional Experience

Elasoft Trabzon, Turkey

Software Development Intern – Long-Term & Summer Placements

- Completed a 60-working-day summer internship and later returned for a full-semester industry placement, contributing to real-world software products across both periods.
- Developed backend and full-stack features for a university **Community Management System** and an internal **Human Resources Management System** using **C#**, **ASP.NET Core**, **Entity Framework Core**, **Microsoft SQL Server**, and **Vue.js**.
- Implemented and improved personnel, leave-request, profile and avatar, asset-assignment, role-based access, validation, and document-export workflows across backend APIs and frontend modules.
- Delivered assigned tasks through Git branches and pull requests, documented implementation changes, and incorporated feedback from senior software engineers through code reviews.

Medyanes 360

Volunteer Software Developer

- Selected after completing a full-stack technical case and presenting the solution during a live technical interview.
- Contributed to web applications across multiple business domains, including a language-learning platform, by implementing assigned frontend and backend features.
- Worked through task, issue, commit, and pull-request workflows while collaborating with the development team and incorporating project feedback.

Recep Tayyip Erdoğan University Rize, Turkey

Part-Time Software Developer

- Contributed to internal university information systems and administrative software by developing full-stack modules that helped digitize and streamline operational workflows.

- Collaborated directly with non-technical university staff to identify operational problems, translate requirements into software features, and refine solutions based on stakeholder feedback.

Selected Projects

Constructor ERP — Multi-Tenant Construction Site Management SaaS GitHub Repository
Live Demo — sign in as any of five roles without a password

Java 25, Spring Boot 4, PostgreSQL 18, Flyway, Vue 3, TypeScript, Docker

- Co-developed and deployed a multi-tenant SaaS product that lets contractors run their construction sites from one place instead of WhatsApp groups, covering site chat, attendance and timesheets, material shipments, subcontractor progress, subscriptions, and platform administration, with separate phone and desktop interfaces.
- Isolated tenant data with PostgreSQL row-level security (RLS) on top of service-level filtering, with a startup check that refuses to run if any table is unprotected; implemented server-side sessions, Sec-Fetch-Site-based CSRF protection, Flyway migrations, and a one-command Docker setup.
- Enforced file and function size limits and layer boundaries at build time with ESLint and Checkstyle, and built a browser-only live demo without touching screen code to work around free-hosting limits.

FraudCell — Event-Driven Fraud Operations Platform GitHub Repository
Turkcell Code Night 2026 All-Star Final

ASP.NET Core 10, YARP, FastAPI, scikit-learn, RabbitMQ, PostgreSQL, React, Docker

- Co-developed a containerized fraud operations platform comprising Identity, Transaction, AI, and Gamification services behind a YARP API Gateway, with a separate PostgreSQL database for each service and RabbitMQ-based asynchronous communication.
- Implemented event-driven transaction assessment using transactional outbox/inbox patterns, role-based authorization, real-time notifications, and fallback handling that kept transaction intake operational when the AI service was unavailable.

ZekAI — AI-Powered E-Commerce Decision Platform GitHub Repository
HackAthon'26 — BTK Akademi × Google × Girişimcilik Vakfı

Next.js, ASP.NET Core 10, Entity Framework Core, PostgreSQL, FastAPI, Google Gemini, Server-Sent Events, Docker

- Co-developed and deployed an AI-assisted e-commerce platform consisting of two Next.js applications, ASP.NET Core APIs, a FastAPI AI service, PostgreSQL, and Google Gemini integrations.
- Implemented seller and buyer workflows for product-content generation, customer-feedback analysis, product suitability and comparison, and real-time streamed AI responses across independently deployed services.

EduConnect — AI-Assisted University Platform GitHub Repository
TÜBİTAK 2209-A Funded Capstone Project

ASP.NET Core 10, Entity Framework Core, PostgreSQL, FastAPI, React, TypeScript, Docker

- Co-developed and deployed a TÜBİTAK 2209-A-funded capstone platform combining social networking, academic collaboration, a student marketplace, and AI-assisted access to university information.
- Strengthened backend reliability, security, and performance by addressing refresh-token and registration race conditions, optimizing search at the SQL layer, validating file uploads, migrating the data layer to PostgreSQL, and containerizing services with Docker.

Turkcell SkillHub — Digital Skills Learning Platform GitHub Repository
Code Night Trabzon 1st Place & All-Star Finalist

Spring Boot, PostgreSQL, React, TypeScript, Material UI, React Query

- Led the winning team and co-developed a full-stack digital skills learning platform, earning first place at Turkcell Code Night Trabzon and qualifying for the İstanbul All-Star Final.
- Built and integrated authentication, course, lesson, quiz, progress, badge, profile, and leaderboard workflows across a Spring Boot API and React/TypeScript frontend under competition time constraints.

Smart Campus — Full-Stack Campus Ecosystem Management Platform GitHub Repository

Node.js, Express.js, PostgreSQL, Sequelize, React, TypeScript, JWT, Docker

- Co-developed and deployed a role-based campus ecosystem platform supporting authentication, GPS-based attendance, meal and wallet operations, event registration, classroom reservations, analytics, and notifications.
- Contributed to both the Node.js/Express backend and React/TypeScript frontend by implementing authorization and analytics endpoints, integrating module APIs, building authentication and profile flows, adding automated tests, and delivering interactive map functionality.

Education

Recep Tayyip Erdoğan University Rize, Turkey
B.Sc. in Computer Engineering *Sep 2021 – Jun 2026*

Awards & Technical Writing

Turkcell Geleceği Yazanlar Code Night
Trabzon 1st Place & All-Star Finalist | Team Captain

TÜBİTAK 2209-A University Students Research Projects Support Program
Funded Project Recipient | EduConnect

Huawei Student Developers
Volunteer Technical Writer

- Authored English-language technical articles on frontend and backend development for Huawei Developer's global and Türkiye publications, personal Medium, and Stackademic, with multiple articles exceeding 4K views and one surpassing 5K views.
